1. IMPORTANT SAFETY INSTRUCTIONS

- This manual contains important instructions for the unit that should be followed during installation and maintenance of the UPS and batteries.
- Install the on line UPS in a well ventilated area, away from flammable liquids and gases. Do not let the unit come in contact with water.
- External slits and openings in the cabinet are provided for ventilation. To ensure reliable operation of the product and to protect from overheating these openings must not be blocked or covered. Objects must never be inserted into ventilation holes or openings.
- Do not stand beverage containers on the unit.
- This UPS was designed to power all modern computer loads and associated peripheral devices, such as monitors, modems, cartridge tape drives, external floppy drives etc.. Do not use it for pure inductive or capacitive loads. It is not rated to power life support equipment.
- All recorded media, such as diskettes, tapes and cartridges, should be kept a minimum of 60cm from the UPS. Otherwise, the magnetic field created by operation of the UPS may erase data on those devices.
- All repairs or installation should be performed by qualified service personnel. The UPS contains voltages which are potentially hazardous. The output receptacles may be alive even when the UPS is not connected to the mains.
- Risk of a possible electrocution is possible when the battery is connected to the UPS. Therefore, do not forget to disconnect the batteries before any service is to be done on the UPS. To disconnect, remove the battery fuse holder which is located at the rear panel of the UPS.
- Isolate Uninterruptible Power Supply (UPS) before working on the circuit. A readily accessible disconnect device shall be incorporated in the fixed wiring.
- HIGH LEAKAGE CURRENT – Earth connection essential before connecting power source.
- Federal Communications Commission Interference Statement
  This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
  FCC Caution: To assure continued compliance, (example-use only shielded interface cables when connecting to computer or peripheral devices). Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate this equipment.
- ATTENTION, hazardous through electrical shock. Also with disconnection of this unit from the mains, hazardous voltage still may be accessible through supply from the batteries. The battery supply should be therefore disconnected in the plus and minus pole of the batteries when maintenance or service work inside the UPS is necessary.
- Do not dispose of the batteries in a fire, the batteries may explode.
● Do not open or mutilate the battery or batteries. Released electrolyte is harmful to the skin and eyes. It may be toxic.

● A battery can present a risk of electric shock and chemical hazard. The following precaution should be observed when working on batteries.

  * Remove watches, rings or other metal objects.
  * Use only tools with insulated handles.

- The compliance with the following standards provides the conformity:
  - EN 62040-1-1
  - EN 62040-2 CLASS A
  - IEEE-C62.41 Category B
  - IEC 61000-2-2
  - IEC 61000-4-2 LEVEL3
  - IEC 61000-4-3 LEVEL3
  - IEC 61000-4-4 LEVEL4
  - IEC 61000-4-5 LEVEL4
  - IEC 61000-4-6
  - IEC 61000-4-8
  - CNS 14843-1
  - CNS 13438 CLASS A

**SYMBOL**

![Protective Grounding Terminal Symbol](image)

PROTECTIVE GROUNDING TERMINAL: A TERMINAL WHICH MUST BE CONNECTED TO EARTH GROUND PRIOR TO MAKING ANY OTHER CONNECTION TO THE EQUIPMENT.

![Manual Symbol](image)

A TERMINAL TO WHICH OR FROM WHICH A DIRECT CURRENT OR VOLTAGE MAY BE APPLIED OR SUPPLIED.

![Phase Symbol](image)

THIS SYMBOL INDICATES THE WORD "PHASE".
2. INTRODUCTION

2-1 FUNCTIONS AND FEATURES

- A True ON LINE design. The UPS insures the critical power protection for your mission-critical equipment at all times.
- Wide input range of power supply that reduces discharge rate of battery.
- A smart charger design for auto equalizing charge to shorten charging time.
- Equipped with RS232 port and Dry-contact interface, using the power management software “UPSentry Smart 2000” allows near-end and far-end UPS monitoring management.
- Automatic detection of 50/60Hz field input frequency
- With excellent performance. Input current using active input power factor correction and a high-frequency inverter with pulse width modulation.
- Optional isolated output transformer: Provides isolation and multiple output voltage.
- Start-on-battery capability for powering up the UPS even if utility power is not available.
- Optional SNMP interface card is an optional accessory for network communication.
- Implementing diagnostic test and LCD message display by using microprocessor technology can provide detailed information on operation status.
- Manual and static bypass switch forms. Allowance for switching to the main power supply.
- Static bypass supply circuit incorporates functions such as surge suppression and EMI filter.
- Remote emergency power off (REPO): Emergency shutdown control through the remote emergency power-off (REPO) port.
- Auto recovery function of inverter:
  - When the AC power is restored after a low battery shutdown, the UPS inverter will automatically restart.
  - Automatic transfer to inverter output from static bypass after overload condition is cleared.
- Alarm cancel facility to switch off the audible alarm and indicative lights still lit in the event of long BACK-UP periods.
- External battery cabinet can be used for extending operation time of battery mode.
- Operation of “ECONOMIC Mode” (Optional): When input voltage is within the range of rating voltage (±10%), the UPS is working in the bypass mode for higher efficiency. Otherwise the UPS will be switched to inverter mode.
- Auto detection for voltage in bypass mode: The protection range is +15%~ - 20%. When the bypass voltage is beyond protection range, the UPS will not supply output power to the load.
- Auto detection and display for normal operation of fan.
1. **INVERTER ON BUTTON**  
Press the “ON” button for 3 seconds to activate the inverter.

2. **INVERTER OFF BUTTON**  
Press the “OFF” button for more than 3 seconds to disable the inverter.

3. **FUNCTION BUTTON**  
- In BYPASS/ECONOMIC/ON LINE/BATTERY mode, press the up (↑) or down (↓) button to view information on load, voltage and frequency of bypass, input and output, battery and charger. (Refer to 5.2.)  
- In ON LINE and ECONOMIC modes, pressing the up (↑) button for more than 3 seconds can detect the battery capacity.  
**NOTE:** If the UPS is in alarm status, pressing the up (↑) or down (↓) button for more than 3 seconds can disable the buzzer.

4. **BACKLIT LCD DOT MATRIX DISPLAY**  
16×2 character display indicates the operating status of I/P and O/P voltage and battery voltage.

5. **NORMAL LED**  
Display the UPS DC/AC circuit is working or not.

6. **BATTERY LED**  
Display the UPS power source is from battery.

7. **BYPASS LED**  
Display bypass voltage condition and UPS output voltage path from bypass.

8. **FAULT LED**
Display any abnormality condition happened on UPS.

2-3 REAR CONTROL PANEL

6KVA
(1). MANUAL BYPASS SWITCH:
To change power load from static bypass to directive bypass while maintaining UPS without any power interruption.

(2). INPUT TERMINALS:
To connect the AC mains input.

(3). OUTPUT TERMINALS:
Connection of the load terminals is supported by UPS.

(4). EXTERNAL BATTERY CABINET CONNECTOR:
Connect to external battery cabinet to extend the backup time.

(5). AC INPUT BREAKER:
Provides safe protection for UPS AC input.

(6). EXHAUST FANS:
For cooling air ventilation of UPS.

(7). REMOTE EMERGENCY POWER OFF:
For more details, refer to Chapter 6.

(8). TRUE RS232 INTERFACE PORT:
For more details, refer to Chapter 6.

(9). DRY-CONTACT INTERFACE PORT:
For more details, refer to Chapter 6.

(10). SNMP CARD (OPTIONAL):
For more details, refer to Chapter 6.

(11). EXTERNAL BATTERY PACK DETECTION:
For more details, refer to Chapter 6.

4. INSTALLATION

4-1 UNPACKING AND INITIAL INSPECTION

Carefully unpack and inspect the UPS upon receipt. If there is damage or anything is missing from the shipment, contact the dealer from whom you purchased the unit and save the packaging for future shipment. The packaging is recyclable, save the box and packing material for reuse. (Pay attention to the packing method. If you need to return the UPS any time, repack it how it was originally shipped.) If the unit passes the initial inspection, record the purchase date on rear panel of the unit.

Package content: 1. User Manual × 1
2. RS232 Cable × 1
3. “UPSentry Smart 2000” software CD × 1

4-2 STORAGE AND BATTERY MAINTENANCE

- If the UPS is to be stored before installation, it should be placed in a dry, ventilated area where it will not be exposed to dirt, moisture or other contaminates.
- Extreme storage temperatures:
  -20°C to + 60°C without batteries.
  -20°C to + 45°C with batteries for a short period.
- Maximum period for battery storage: 6 months at 20°C or 3 months at 30°C.
- Eight hours of charging time is needed when the UPS is charged for the first time.
- If battery capacity still remains low after recharging for 8 hours, contact your dealer to replace the batteries.
- If the UPS is to be powered off for a long period, it is recommended that the UPS should be switched on for 24 hours before power off. The battery should be recharged every 3 months to prevent irreversible battery damage.
- While replacing the batteries, use the same number and the following types of batteries:
  6KVA:12V/7Ah×20/1SET, YUASA (NP7-12) or CSB (GP1270) or B&B (HR7-12).
  12KVA:12V/9Ah×20/1SET, YUASA (REW45-12) or CSB (HR1234WF2) or B&B (HR9-12) or Matsushita (LC-R19).

4-3 PLACEMENT

Install the ON LINE UPS in a temperature and humidity controlled, indoor environment, free of conductive contaminants. Ambient temperature must not exceed 40°C (104°F).
IMPORTANT: To maintain the maximum battery life, please keep the UPS at an ambient temperature of 15°C to 25°C. Battery life is reduced by half for every 10°C above 25°C.
Required Protective Devices and Cable Selection:

Refer to the following table on recommended cable and upstream protection:

<table>
<thead>
<tr>
<th>Model</th>
<th>Rated Input Cable</th>
<th>Rated Output Cable</th>
<th>Upstream Circuit-Breaker</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 KVA</td>

<td>D curve – 40A</td>
</tr>
<tr>
<td>12 KVA</td>
<td>6AWG or 14mm²</td>
<td>6AWG or 14mm²</td>
<td>D curve – 63A</td>
</tr>
</tbody>
</table>

SELECTION OF CONDUIT AND BUSHING:

According to National Electrical Code, install all the wiring with suggested suitable conduit and bushing as below.

- Conduit: Flexible metal conduit sized one inch.
- Bushing: Overall diameter is 40.5mm, height is 13.1mm.

Input and Output Connection:

When connecting the cable, please note that:

1. Before connecting, turn off the UPS and cut off AC power and battery.
2. Ensure the cable is fitted. The minimum tightening torque shall not be less than 35 lbs with a cable sleeve & secured by the connector clamp.
3. Connect the EARTH wire to the terminal marked with "  

The connective methods of input and output:

1. Output 1Ø, 3 wires: (For 6KVA and 12KVA)
4-4 HANDLING

- The unit is fitted with wheels for moving it over a short distance. It is stabilized by four feet at both side. For safety reason, secure the unit by releasing the feet. Refer to Fig.1&2 or Fig.1&3
- The UPS should always have a clearance space of 300mm at the rear and 100mm on its side. Refer to Fig.4

**Fig.1**

Remove the screws.

**Fig.2**

First change the direction and fixed of “L” type metal then revolve screw plastic foots to ground.

**Fig.3**

First change the direction and revolve screw plastic foots on side of “L” type metal then to fixed “L” type metal on ground.

UPS
5. OPERATION

5-1 POWER ON/OFF INVERTER

Power on Inverter
Switch on the AC input breaker on rear control panel, and the load will be energized.

- When the AC input is normal, press the inverter “ON” button on front control panel for 3 seconds.
- When the AC input fails, press the “ON” button for more than 3 seconds to turn on inverter from batteries.
- The UPS starts diagnostic test and shows the results on the back lit LCD display as shown below.

**DIAGNOSIS MODE**

```
AC START

DIAGNOSTIC MODE

</tr>
</tbody>
</table>

**Power Off Inverter**

Press the "OFF" button on front control panel to disable the inverter:

- If the AC input power exists, the UPS will be switched to BYPASS mode.
- If the UPS is in backup mode, the message “UPS OFF WAITING” will be displayed on LCD about thirty seconds then disappear.
- Before removing the battery connect wire, please wait until the message “UPS OFF WAITING” displayed on LCD disappears.
5-2 LCD FUNCTION SELECTION SWITCH

In BYPASS/ECONOMIC/ON LINE/BATTERY mode, press the up (↑) or down (↓) button on front control panel to view different power readings on LCD.

**OPERATION IN BYPASS MODE**

- **BYPASS MODE**
  - LOAD = XXX%  X.XXKW
- **BYPASS MODE**
  - BYPS = XXXV  XX.XHz
- **BYPASS MODE**
  - IN = XXXV XX.XHz
- **BYPASS MODE**
  - OUT = XXXV XX.XHz
- **BYPASS MODE**
  - BATT=XXXV XXX%
- **BYPASS MODE**
  - CHRG=XXXV FLOAT(BOOST)

Press select key after each mode.

**OPERATION IN ECONOMY MODE**

- **ECONOMY MODE**
  - LOAD = XXX%  X.XXKW
- **ECONOMY MODE**
  - BYPS = XXXV  XX.XHz
- **ECONOMY MODE**
  - IN = XXXV XX.XHz
- **ECONOMY MODE**
  - OUT = XXXV XX.XHz
- **ECONOMY MODE**
  - BATT=XXXV XXX%
- **ECONOMY MODE**
  - CHRG=XXXV FLOAT(BOOST)

Press select key after each mode.

**OPERATION IN ON LINE MODE**

- **ON LINE MODE**
  - LOAD = XXX%  X.XXKW
- **ON LINE MODE**
  - BYPS = XXXV  XX.XHz
- **ON LINE MODE**
  - IN = XXXV XX.XHz
- **ON LINE MODE**
  - OUT = XXXV XX.XHz
- **ON LINE MODE**
  - BATT=XXXV XXX%
- **ON LINE MODE**
  - CHRG=XXXV FLOAT(BOOST)

Press select key after each mode.

**OPERATION IN BATTERY MODE**

- **ON BATTERY**
  - LOAD = XXX%  X.XXKW
- **ON BATTERY**
  - BYPS = XXXV  XX.XHz
- **ON BATTERY**
  - IN = XXXV XX.XHz
- **ON BATTERY**
  - OUT = XXXV XX.XHz
- **ON BATTERY**
  - BATT=XXXV XXX%
- **ON BATTERY**
  - CHRG=XXXV OFF

Press select key after each mode.
5-3 PARAMETER SET-UP MODE

Press both up (↑) and down (↓) buttons altogether for 3 seconds, then the UPS will enter SET-UP mode.

SET-UP MODE
5-4 OPERATION ON BYPASS VOLTAGE BEYOND ALLOWABLE RANGE

The UPS can automatically detect the voltage in bypass mode. The protection range is +15%~ -20%. When the bypass voltage is beyond protection range, the UPS will not supply output power to the load.

When the bypass voltage is higher than 115% of rating voltage, the UPS will alarm and will not supply output power to the load. The message “BYPS OUT OF VOLT” will also be displayed on LCD.

When the bypass voltage is lower than 80% of rating voltage, the UPS will alarm and will not supply output power to the load. The message “BYPS OUT OF VOLT” will also be displayed on LCD.

5-5 OVERLOAD AND SHUTDOWN OPERATION

Overload Operation
When the UPS detects an output overload, it will commence a countdown (The length of time depends on the severity of the overload.). If the UPS is still overloaded at the end of the countdown, the UPS will automatically shut down and enter BYPASS mode.

<table>
<thead>
<tr>
<th>Overload Condition</th>
<th>LCD Display Message</th>

<td>Low battery shutdown imminent</td>
</tr>
<tr>
<td>Under</td>
<td>Long beep</td>
<td>Battery under shutdown</td>
</tr>
</tbody>
</table>

5-7 OPERATION OF MANUAL BYPASS SWITCH

The manual bypass switch is used for maintenance. In this situation, the AC input power is directly supplied to the load.

---

**CAUTION!**

Activate manual bypass switch only when the UPS is in BYPASS mode.

- **NORMAL** ➞ **BYPASS**
  - STEP 1: Turn off the inverter power to switch the UPS to BYPASS Mode.
  - STEP 2: Switch from “ON LINE” to “BYPASS”.
  - STEP 3: Switch off the AC Input breaker on rear panel.
  - STEP 4: Remove the battery connect wire.

- **BYPASS** ➞ **NORMAL**
  - STEP 1: Insert the battery connect wire.
  - STEP 2: Switch on the AC Input breaker on rear panel.
  - STEP 3: Switch from “BYPASS” back to “ON LINE”.
  - STEP 4: Press the ON button on front control panel to turn on the inverter.
6. COMMUNICATION INTERFACE

6-1 RS232 INTERFACE

A 9-pin female SUB-D connector is provided on rear panel of UPS to transmit the UPS signals to the computer. Using the Delta “UPSenrry Smart 2000” software allows users to check the power status. The details on signals are shown as below.

<table>
<thead>
<tr>
<th>Pin Assignment</th>
<th>Load level</th>
<th>Battery status</th>
<th>Battery level</th>
<th>UPS mode</th>
<th>Input voltage</th>
<th>Output voltage</th>
<th>Input frequency</th>
<th>Temperature inside unit</th>
<th>Set shut-down delay time</th>
<th>Enable / Disable beeper</th>
<th>Remote shut-down</th>
</tr>
</thead>
</table>

**Pin Assignment:**
- Pin 2: TXD (Transmit Data)
- Pin 3: RXD (Receiving Data)
- Pin 5: GND (Signal Ground)
- Pin 7: PNP (Signal Receiving)

**Hardware:**
- Baud Rate ------------- 2400 bps
- Data Length ------------- 8 bits
- Stop Bit ----------------- 1 bit
- Parity ------------------ NONE

6-2 REMOTE EMERGENCY POWER OFF

**Pin Assignment of RJ11:**

If short pin (2, 3) or pin (2, 5) or pin (4, 5) or pin (4, 3), then the UPS will be powered off.

**NOTE:** This port must not be connected to the Telecom Port.
6-3 DRY CONTACT

The sub-D communication port (9-pin female type) is used for powering on/off the UPS by external control signal. UPS can also transmit its status through this port. Refer to the following Dry contact table.

<table>
<thead>
<tr>
<th>State</th>
<th>Pin</th>
<th>Pin 8, 3</th>
<th>Pin 1,3</th>
<th>Pin 6, 3</th>
<th>Pin 5, 3</th>

</tbody>
</table>

**NOTE:** means the state may be “Open” or “Close”.

**Pin Assignment:**

![Diagram](Fig. 5-2)
SNMP network interface is a powerful tool for remote control and UPS monitoring.

NOTE: For more information on SNMP CARD, contact your local dealer.
When the UPS is connected with Delta’s standard battery packs, you can detect the total battery capacity by linking the UPS to the battery pack.

NOTE: This function can detect maximum two external battery packs.
